

The placing tool drive screw is the key component at the installation of blind threaded inserts. The drivescrew is responsible for consistent and dependable installation of the inserts in high-volume production.

After a review of the Avdel Blind Threaded Insert system, we are launching a new and improved family of drive screws for greater reliability and durability with the following features:

Features and Benefits

- Sizes M3 to M12
- To suit Avdel 74200, 74201 and 74401 placing tools
- Same drive screw part numbers retained
- Interchangeable with existing nose equipment
- Forged alloy steel 42Cr Mo4
- Thread rolled after heat treatment for optimum thread durability
- Exceeding ISO 898-1: Property Class 12.9 tensile strength

Thread Size

Part No.

Thread Size	Part No.
M3	07555-09003
M4	07555-09004
M5	07555-09005
M6	07555-09006
M8	07555-09008
M10	07555-09010
M12	07555-09012

Avdel drive screws feature plain heads.

The drive screw is the key component of the placing equipment.
