

This system replaces the standard pneumatic trigger with a preloaded mechanical trigger. It uses the force exerted by pushing the fastener into the application to trigger the installation.

**Features and Benefits**

- Increased safety - rivet is only placed if correctly positioned in application
- Improved product quality through increased consistency of fastener placement
- Adjustable placement force for ease of use
- Available on all Genesis® nG models
- Uses standard Genesis® nose equipment parts
- Places the whole range of Avdel breakstem fasteners

**Specifications**

Tool performance, cycle rate, pull force etc. are unaffected.

The sensitive trigger accessory is available in two options:

- The sensitive nose (Part-No. 71218-03100) requires nose and trigger activation to place fasteners
- The sensitive nose with override trigger (Part-No. 71218-03200) requires nose activation only to place fasteners

**Tool Preparation**

For detailed information on fitting the sensitive trigger to the Genesis® nG tool and the correct use, please refer to the data sheet on our website [www.avdelmanuals.co.uk](http://www.avdelmanuals.co.uk) or contact your local STANLEY Engineered Fastening representative.

**Dimensions (mm)**
