

Bumper Spacers & Gap Hiders

Description

Emhart Teknologies' bumper spacers (also called gap hiders) secure front and rear fascias to sheet metal while ensuring exceptional fit and finish. Our industry benchmark designs vary from 1-piece products with integral attachments to multi-piece assemblies that seal against water and dirt.

Emhart's Full Service Capabilities

Product Design/Development

- Application/Systems Engineering
- Computer Aided Designs/Methods
- Prototype & Tooling Design
- Testing & Design Validation

Launch/Production Support

- Process Development
- Quality Planning
- Change Management

Features/Benefits

- Positive positioning maintains body panel margins and improves the appearance of the system interface
- Lightweight honeycomb design combines with high-strength materials to produce a product with high strength-to-weight ratio
- Designs for poke-yoke (mistake proofing) ensure quick and easy assembly
- Low insertion efforts reduce assembly plant time and effort and improve operator ergonomics
- Attachment features are designed to ensure quick, easy serviceability
- Performs exceptionally under a wide range of operating and environment conditions over the life of the vehicle
